

Aaquatics Environment and Sustainability Policy

We are committed to operating in a sustainable manner that ensures that our business needs are met but that we do not compromise the future for ourselves or others. The conservation of the environment is a fundamental priority for us.

Sustainable Energy

Operating a pool is an energy intensive process, we must ensure the water and surrounding environment is heated and the water is filtered and treated to ensure the pool remains safe for everyone that uses it. With this in mind, we favour the use of green energy through the installation of solar panels and other renewable energy sources. The recovery of heat through air-source heat pumps and MVHR is also key to ensure energy is not unnecessarily wasted.

Carbon emissions and Net-Zero

We are committed to ensuring Aaquatics is net zero. The use of sustainable energy as mentioned above is key to ensuring that our scope 1 & 2 emissions can be reduced to zero. We are in the process of establishing an action plan to facilitate this objective.

Recycling and Waste

Recycling is best practice and we encourage it wherever possible. However, we also aim to reduce the production of waste whether it can be recycled or not. We do this by;

- Efficient printing only when needed.
- Utilising technology throughout the business and taking digital registers.
- Promoting recycling and reduction of waste throughout all our centers
